Cooling your industry, optimising your process.

Air cooled industrial chillers with Scroll compressors - R410A
Nominal cooling capacity 1.7 – 53.6 Tons
TAEevo Tech is an air cooled liquid chiller, designed for industrial use and for installation in an external environment. A broad range of options available in product configuration and accessories in kit form, complete the already generous standard equipment and allow this machine to meet the majority of requirements of industrial applications. TAEevo Tech is therefore the solution for all applications that require high performance, reliability, continuity of operation and reduced management costs.

Higher energy efficiency
Thanks especially to the energy efficient scroll compressors, the oversized evaporator and the refrigerant R410A, TAEevo Tech achieves leading energy efficiency levels. This is mated to low maintenance needs, ensuring TAEevo Tech is a highly economical long-term proposition.

Respect for the Environment
The eco-friendly refrigerant R410A (ODP=0) with outstanding heat conductivity, coupled with the low absorbed power level of the scroll compressors, reduce the environmental impact, minimizing the energy waste. Recyclable and high quality materials ensure respect for the environment, and reduces the carbon footprint.

IC208CX microprocessor control
TAEevo Tech features a new advanced microprocessor control technology, with all models fitted with a unique IC208CX digital control. A comprehensive digital display keeps the user fully informed concerning the correct operation of the unit, warnings and alarms.

User friendly
The operation principle of the unit is displayed in a simple and intuitive synoptic sticker with new design. The meaning of the codes of the main alarms shown on the display of the controller are therefore easy to understand, even without the help of the instruction manual, thus facilitating the maintenance activities.
MAXIMUM RELIABILITY, SYSTEM SIMPLIFICATION, ENERGY EFFICIENCY, EXTENSIVE RANGE OF ACCESSORIES AND KITS: THESE ARE SOME OF THE ADVANTAGES OF MTA CHILLERS

Standard features

- Refrigerant R410A;
- Hermetic Scroll compressors;
- High-efficiency finned coil evaporator with copper tubes and aluminum fins, installed inside the water storage tank;
- Axial fans with galvanized steel (mod. 015-020) or die-cast aluminum/plastic crescent-shaped blades (mod. 031-802);
- Air-cooled condensers [copper tubes/aluminum fins] fitted on one side of the chiller (mod. 015-602). Air filter standard from mod. 031;
- Storage tank (design pressure 87 psig) complete with P3 pump, filling/drain valve, pressure gauge;
- Internal hydraulic bypass between the inlet and outlet connections;
- Electronic level sensor with water conductivity function;
- High and low refrigerant pressure switches;
- Refrigerant pressure gauges (mod. 031-802);
- Parametric microprocessor control IC208CX;
- Protection rating: IP54 (mod. 031-802) or IP44 (mod. 015-020);
- Dynamic set point function;
- Phase monitor against phase loss and phase reversal;
- Compressor crankcase heater.

Main benefits

- Refrigerant R410A is an environmentally friendly fluid (zero ozone depletion potential) and provides high performances thanks its outstanding heat conductivity;
- The innovative evaporator-in-tank configuration has been designed specifically for industrial process cooling. It allows a reliable operation also with high flow rates (with low pressure drops) and is furthermore compatible with the presence of contaminated process fluids;
- Large cold water tank keeps outlet water temperature constant even under varying load conditions;
- Scroll compressors ensure high efficiency, excellent performance and elevated energy savings;
- Plug-in solution with integrated pump and tank, perfectly suited to the needs of the industrial User;
- Protection class IP44 (mod. 015-020) and IP54 (mod. 031-802) makes TAEevo Tech suitable for outdoor installation;
- Extended operating limits: TAEevo Tech standardly accepts water inlet temperatures up to 95 °F, and delivers outlet temperatures down to 14 °F. TAEevo Tech operates with ambient temperatures up to 114.8 °F and with minimum ambient temperature down to 23 °F;
- Extensive range of accessories and kits, allow each unit to match the specific customer requirements;
- Cooling circuit suitable both for atmospheric and pressurized hydraulic circuits (up to 87 psig);
- Comprehensive safety equipment, including phase monitor pressure switches, antifreeze sensors, level sensors, crankcase heaters and an internal hydraulic bypass circuit;
- The dynamic set point function is an ambient tracking system available as standard. The microprocessor automatically adapts the set point of the outlet water temperature to a set differential from the ambient temperature.

The perfect solution, whatever your application

**Plastics & rubber:** presses, injection moulding, extrusion (sheet & profile), blow moulding, thermoforming, PET.

**Lasers, with a specific Laser chiller:** cutting, welding, profiling, optics, medical, engraving.

**Food & drinks:** confectionary, bakeries, distilleries, breweries, wineries, dairies, bottling, carbonation, meat & fish processing, vegetable & salad processing, storage.

**Chemical & pharmaceutical:** jacketed vessels, polyurethane foam mixers, natural gas, industrial cleaning, laboratories, healthcare, solvents, paints.

**Metal working:** processing & transformation of precious metals, aluminium working & processing.

**Mechanical & Engineering:** machine tools, welding machines, rolling mills, presses, extruders, cutting, profiling, polishing, electric spark machinery, hydraulic control unit oil cooling, pneumatic transport, heat treatment.

**Paper & related applications:** printers, cardboard, labels, plastic film.

**Other applications:** ceramics, textiles, wood, rental, air compressor cooling, other applications.
Personalize TAEevo Tech to your individual needs

Main options and kits
The high quality of the standard unit, the wide range of options and kits suitable to develop customized solutions, make TAEevo Tech chillers the ideal choice for every type of industrial cooling application.

- Pump options: P3 (45 psig), P5 (72 psig); SP (this version without pump includes the electrical devices necessary to supply an external P3 pump);
- Condenser option: version with painted fins against corrosion;
- Manual filling tank kit: suitable for hydraulic circuits at atmospheric pressure (mod. 015-802);
- Automatic filling kit: suitable for pressurized hydraulic circuits (up to 87 psig);
- Glycol filling kit: suitable for pressurized hydraulic circuits;
- Automatic glycol pumping group;
- Automatic hydraulic bypass option factory fitted (mod. 031-602);
- Simple remote ON/OFF kit (max 500 ft);
- Remote control kit: VICX620 display LED, VGI890 display LCD semi graphic (max 500 ft);
- Supervisor kits: RS485 ModBus, xWEB300D;
- Automatic hydraulic bypass kit external (mod. 015-602).

Versions
- Non Ferrous Version (mod. 015-351): stainless steel water tank, copper/brass exchanger, stainless steel pump;
- Dual frequency version (mod. 015-161): 400V/3/50 Hz – 460V/3/60 Hz power supply;
- 50 Hz version (mod. 015-802): 400/3/50 Hz power supply; comply with CE directives; certified by Eurovent.

Special Executions
- Centrifugal fans (mod. 031-161);
- High efficiency EC brushless axial fans with high head pressure (max 150 Pa) and inverter control (mod. 201-802);
- Centrifugal fans kit (mod. 031-161);
- Version for low environmental temperature 4 °F (mod. 031-802): electrical panel heating, electronic fan speed control;
- TAEevo Tech HE High Efficiency (Mod. 031-802): high efficiency version class A Eurovent;
- Double pump P3+P3 or P5+P5 in standby;
- Close temperature control (hysteresis ± 0.9 °F);
- Axial fans electronic fan speed control by phase cut (mod. 031-802);
- Anti-freezing heaters (on tank and pumps) option;
- Soft starter option: factory fitted (mod. 381-802);
- Axial fans electronic fan speed control kit (mod. 031-802);
- Electronic expansion valve (mod 081-802).

Characteristics of a unique chiller

UL Certification
Models TAEevo Tech 015-802 are supplied with UL certification of the electrical panel suitable for American-Canadian markets. The models feature an electrical panel certified in compliance with UL508A, compressors and fans UL compliant.

TAEevo Tech dual-frequency (Mod. 015-161)
Dual-frequency units (mod. 015-161) can be supplied in differently in 400V/3ph/50 Hz - 460V/3ph/60 Hz. This version is available with the following options: P3 pump or SP without pump. This configuration is supplied with axial fans (ON/OFF control). (NON-UL)

TAEevo Tech HE High efficiency (Special Executions)
Models TAEevo Tech 031-802 are also available in high efficiency version with class A Eurovent (EN14511). The main features for the HE version are: oversized condensing coils, scroll compressors and high efficiency EC brushless axial fans inverter controlled. (NON-UL)

TAEevo Tech 50 Hz version (Mod. 015-802)
The most popular solution, featuring advanced technical solutions as scroll compressors, a new electronic control, that allow quick and easy installation and high versatility in a multitude of applications. As per the rest of the range, the internal tank and pump offer a fully packaged all-in-one solution.

Atmospheric pressure fill kit
This kit is simply installed onto the back of the chiller itself, and features a generous tank with an easy to read water level indication encased within a tough painted steel cabinet. A tap offers easy chiller water tank filling (atmospheric hydraulic circuits).
High-efficiency evaporator

High-efficiency finned coil exchanger features copper pipes and aluminum fins, shoulders and cabinet made of galvanized steel. The evaporator is installed inside the water storage tank ensuring reduced ambient heat gain and a steady temperature of the process fluid. The process fluid flows in contact with the finned surface, cooled by the refrigerant which evaporates inside the tubes. This particular technical solution allows TAE Evo Tech to operate with high flow rates and reduced pressure drops, ensuring a high level of reliability in heavy industrial applications and also with liquids containing impurities. The heat exchanger is protected from the risk of freezing by a temperature sensor and a control level, by means of which the controller is able to turn the compressors off in case of fault.

Pumps

Centrifugal pumps with seals made of silicon carbide (SiC/SiC/EPDM), available in two different configurations:

**Pump P3** - nominal head pressure 43 psig, stainless steel water side mod. 015-251; cast iron mod. 301-802.

**Pump P5** - nominal head pressure 12 psig, in stainless steel water side mod. 015-161; cast iron mod. 201-802.

For models 201-802 it is also available the configuration with double pump P3+P3 or P5+P5 in standby, with automatic switching (special).

Scroll compressors

Compressors with orbiting scrolls, with 2-pole electric motor, mounted on rubber antivibration dampers and complete with protection against overheating, excessive currents and against high temperature of the exhaust gases. Thanks to the axial/radial compliance, the low weight of the rotating components and the absence of suction and discharge valves, they offer a series of benefits as reduced energy consumptions, low vibrations, less moving parts and high resistance to liquid refrigerant returns.

Pressurised fill kit

This kit, is suitable for pressurised hydraulic circuits (up to 87 psig). The pressurised fill kit features all components required for safe and easy operation, including a pressure reducer, water inlet valve, pressure gauge, automatic relief valve, safety valve and expansion tank.

Remote control options

The following kits allow the remote control of the unit:

- Simple remote control module [ON/OFF, unit status] for installation at up to 500 ft from unit;
- Advanced remote control kits VIC620 and VISOGRAPH VGI890, both with LED display (full control), for installation at up to 500 ft.

Supervisor options

TAE Evo Tech can be linked to various external Supervisor systems:

- RS485 serial connection to an external Supervisor system (MODBUS and other leading systems);
- xWEB300D Supervisor kit, operating via Internet;
- xWEB300D + GPRS modem for remote GSM connection directly to a smartphone.

EC brushless axial fans (Special Executions)

The innovative EC axial fans with high head pressure (max 150 Pa) are operated by a synchronous electric motor with permanent magnets and Integrated inverter speed control. Thanks to the brushless technology these fans feature a reduction in electrical consumption and an increase of reliability and energy efficiency.

Maximum control

The large tank and evaporator ensure steady water temperatures, even during sudden load variations. This is further enhanced by passing the water through the evaporator before entering the tank, offering a ready chilled water supply. HP, LP and water manometers (from mod. 031) give a quick overview of status.

* Evaporator outlet water temperature being equal.
Typical configuration for users suitable for closed circuits

The below diagram shows a typical closed circuit lay-out. Pressurised closed circuit applications (5) always require an expansion vessel. TAEevo Tech units in standard (evaporator in tank) configurations are ideal for such applications, and offer a pressurised automatic fill kit including the expansion tank (as option).

Pressurised closed circuit applications (5) can also feature TAEevo Tech units equipped with prismatic tank and plate type evaporator, with these featuring a pump and a tank kit (verify the height difference between the chiller and the user).

Typical configuration for users suitable for open circuit

The below diagram shows a typical open circuit lay-out. For atmospheric circuit applications featuring an open tank (4), the water is in contact with the ambient air, as such no expansion vessel is required. Such applications are suited to TAEevo Tech units in standard (evaporator in tank) configuration but without the tank kit and pump, given that the system typically features an external pump (2).
